

**microSYST**  
DISPLAYS FOR  
ACCESS CONTROLS

## General information

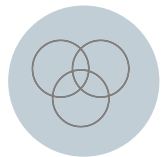

### Hardware

**Custom-made display** for optimal readability up to 100 meters (e.g. display dimension 100 x 16 cm with character height 12 cm / reading distance 50 meters)

**For indoor and outdoor use** with high-contrast LEDs with large reading angle  
**Integrated brightness sensor** for optimum visibility in all weather conditions

**Clear presentation** of texts and graphics in 7 luminous colours

**Mounting** for wall, pole or ceiling mounting

**Maintenance-free** and power-saving for low operating costs

## General information

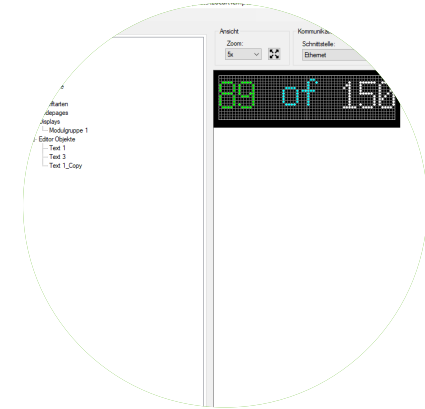

### Software

**Any text and graphics transferable** per microSYST configuration software via USB or WLAN  
**individually configured and activated** for optimal results

**Autonomous** system (e.g. via button for counting function or input software) or connection to an already existing system (e.g. people counting system)

Configuration software for the display

### Your benefits

- **Real time information**

With the display system you communicate all important information to your customers – clear, powerful and always up to date!

- **Robust display system for many applications**

Whether indoors or outdoors, one-sided or multi-sided: the display systems of microSYST are modular and will be configured for you.

- **Display systems according to your requirements**

The display system runs autonomously, but it can also be easily connected to existing systems such as people counting systems. Please contact us, we will be pleased to advise you and find the optimal solution for you.

## Examples of possible applications

Visualisation of calls to action to customers in a supermarket

Visualisation of hygiene and behavioural rules in the supermarket

Visualisation of hygiene and behavioural regulations in medical practices

Visualisation of distance rules and information for visitors to a swimming pool
