microSYST
PRICE DISPLAYS

General information

Hardware

Modular displays for staggered installation with fixed lettering or full-surface installation with display of fuel type

Individual design of the price display with pole-mounting, covered pillar or wall-mounting as well as imprint of logos or payment options

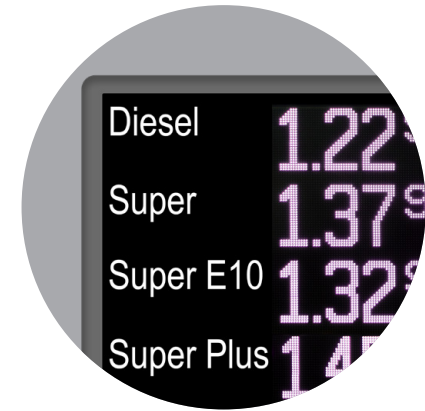

High-contrast LED displays with integrated **brightness sensor** for adaptation to ambient light conditions

Variable pixel pitch of 4 or 8 mm for optimum readability at different distances

Robust and full-colour LED displays for outdoor use

Maintenance-free and durable technology

Example of price display with fixed lettering

General information

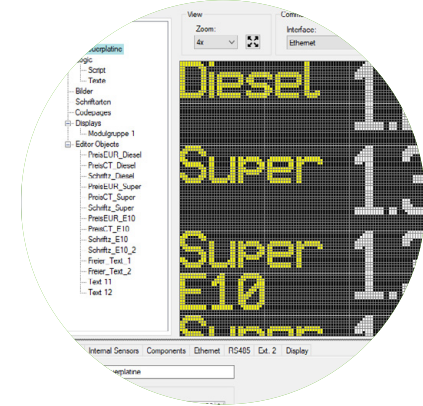

Software

Easy configuration of the visualisation with microSYST software

Direct interface to POS system via **EPSI protocols**

Configuration software for price displays

Your advantages

- **From one LED module to a full-surface display panel**
The modular system design allows individual display sizes - from a simple price display to a full-surface LED board for even more flexibility in presentation!
- **Luminous, high-contrast and up to 7 luminous colours**
Whether rain, fog or sunshine - the built-in LED modules are equipped with a brightness sensor for optimal readability in any weather.
- **Simple system integration**
Our system can be easily connected to your data management system via EPSI - you can easily configure the content via our software.
- **Durable and maintenance-free system**
microSYST uses fanless technology for its display systems - this means your price displays are maintenance-free. The displays are also built into robust aluminium housings, which also allow for double-sided design.

Examples for price displays

Full-screen price display with display of free e-parking spaces

Full-surface price display with advertising space for customer information

Full-surface price display with labelling of payment options

Price display with fixed lettering and LED display for prices
