DISPLAYSYSTEMS

SUCCESS

Display systems by **microSYST** successstories

Requirements

- Freight forwarder with several truck loading ramps for loading and unloading the freight
- Measuring and displaying the distance to the truck loading ramps when reversing
- Additional visualisation of the loading ramp numbers possible

Realisation

- Project planning, construction and production of the LED displays for wall mounting on every truck loading ramp
- Use of the large format LED displays „miline“ with a character height of 120 mm
- Integration of a distance meter into the display system
- Customer-specific visualisation of the measured values (e.g. in „cm“, a reflected view for truck drivers, different colours for the distances)

Customer benefits

- Process optimisation due to the visualisation of the loading ramp number as well as the real-time distance to the ramp
- Reduction of accidents when approaching the truck loading ramps due to the visualisation of the distance
- Acceleration of the process by using visual information
- Easy comprehension due to pictograms and the indication of units
