
LED display system for access control

Next please!

Windischeschenbach, 21.10.2020

Whether it is shops, supermarkets, public authorities, swimming pools or doctors' offices - for the foreseeable future, we will continue to see regulated visitor numbers and controlled admission to facilities. The flow of people needs to be controlled and coordinated. To make this as convenient as possible for entrepreneurs, employees and guests or customers, system electronics provider Microsyst has developed an easy-to-use, yet multifunctional LED-based system.

Information in real time

With the new access system, customers and guests always have a clear, bright and, thanks to networking, up-to-date view of all important information. From amusement parks to shops to doctors' offices: the displays are suitable for indoor and outdoor use and can be read on one, two or more sides. The modular design allows exact adaptation to the situation on site and the needs of the customer.

Multifunctional

In addition to being used for access control, the displays can also visualise other information at a glance: Notes on hygiene regulations or distance regulations, recommended measures for customers and employees or other important information, such as changed opening hours and much more. The use of different fonts and graphics in up to 7 luminous colours promises maximum variability in visualisation.

Self-sufficient or integrable

The robust displays are suitable for every area of application and impress with their high luminosity and contrast. Indoor and outdoor versions are available. Via push-buttons for counting functions or input software, they can be used as fast self-sufficient solutions. On the other hand, they can also be connected to existing systems without any problems. Maintenance-free and energy-saving technology ensures low maintenance costs.

About microSYST Systemelectronic GmbH

Founded in 1985, the company based in Weiden i. d. Opf. has been developing, manufacturing and selling LED display systems for 30 years. The comprehensive know-how in LED technology goes back to the early in-house developments. This pronounced pioneering spirit is still deeply rooted in the company today. With future-oriented thinking and environmental awareness, microSYST will continue to dedicate itself to LED technology in the future under the following principles

- Know-how right from the start*
- Individual development and production*
- Adapted systems with unique optics*
- Regionally sustainable and efficient*
